01

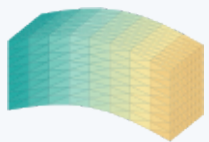

Observe positions

Geometry + mass supplied

02

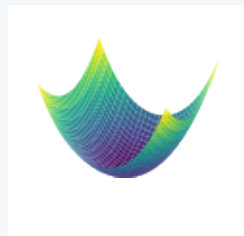

Fit scene descriptors

Material / attachment state

03

Shared local laws

$W_\theta(F, z_m) \quad + \quad \psi_\phi(\delta, z_b)$

Pretrain once; freeze weights

04

Compose & solve

Query poses + gravity + contact

05

Predict & render

New motion + held views

POSITION INPUT Fit descriptors, not network weights

Schematic components; physical and image errors are measured separately.

PHYSICS OUTPUT Deformation / reactions

VISUAL OUTPUT Transported Gaussian appearance
