Does the inferred explanation predict a different load?

Case 000 · held load x = +20 mm · 0.08 N downward · true scale · fixed/adaptive: 4 measurements

Reference	Initial posterior	Fixed measurements	Adaptive measurements
			
Block	Volume-weighted error: 0.050 mm	Volume-weighted error: 0.010 mm	Volume-weighted error: 0.011 mm
Reference	**Initial posterior**	**Fixed measurements**	**Adaptive measurements**
			
Step	Volume-weighted error: 0.076 mm	Volume-weighted error: 0.073 mm	Volume-weighted error: 0.077 mm

Reference is a known simulated response. Predictions are posterior means. These panels are geometry, not photorealistic reconstruction.
